ABSTRACT

The invention relates to an optical component (30) to be mounted on a transfer surface (20).

10

According to the invention, at least one face (A) of the component comprises at least one metallised bonding land (37, 38) arranged in a notch for assembly by transfer of the component (30) and soldering of metallised bonding lands (37, 38) on the

15

transfer surface (21).
